Hi,
Sorry I did it in the topic description.
I need to ftp a small sqlite database up to a website so that someone with another program can download it from the website. Could you please provide code examples.

Thanks

Hi,
As my knowledge sqlite is a single file base database engine.  To upload the file to web server, you need to close all connection to the database. Then uses the plugin/ftp package to push your file to web server.

In IDE, select Project->Package organizer, Add plugin/ftp package to your package.

```
String data;
// read in your sqlite file to data

FtpClient ftp;
if (!ftp.connect(<webserverhostname/webserverip>, <ftpusername>, <ftppassword>, true, 10)) {
    Exclamation("Connect error!");
    return;
}
if (!ftp.Save(<thedestinationpath>, data) {
    Exclamation("Save error!");
    return;
}
ftp.Close();
```

Hi,

Thank you very much for that. For other reasons I had stopped work on the project for which I needed this help. Fortuitously I have just started on it again so your help is much appreciated.

Regards,

Chris
