Things heat up

With today's issues fixed, we have got a new release candidate.

Greetings and good luck with 2017.1 U++ release.
Mirek, if I may help with logo specially for this release - please let me know.
I also want to ask if it is possible to fix FreeBSD Makefile generation in 2017.1.rc to be able to build U++ apps in command line? This is of course the main building scenario under FreeBSD.

Too late for that, I am afraid.

Mirek

Hi Mindtraveller

You can build umk with 'make umk' on FreeBSD.
You will perhaps be able to generate good BSD Makefiles with umk with tomorrow snapshot.
Senderghost has created a patch that enable dynamic platform Makefile generation, a patch allowing you to compile like this:

```
umk assembly package CLANG +POSIX,BSD,FREEBSD -rs package.out
```

or generate Makefile like this:

umk assembly package CLANG +POSIX,BSD,FREEBSD -rsxMk out/

libmysql is not in your library path and the linker complains about it.
What's the problem Melek?

When compiling the application throws me that error, I already did the configuration in the "Build Methods" or at least as the tuto says hehe and I throw that mistake.
I am using MySql Server 5.7 and added all the necessary routes, I will send captures.

Hello,

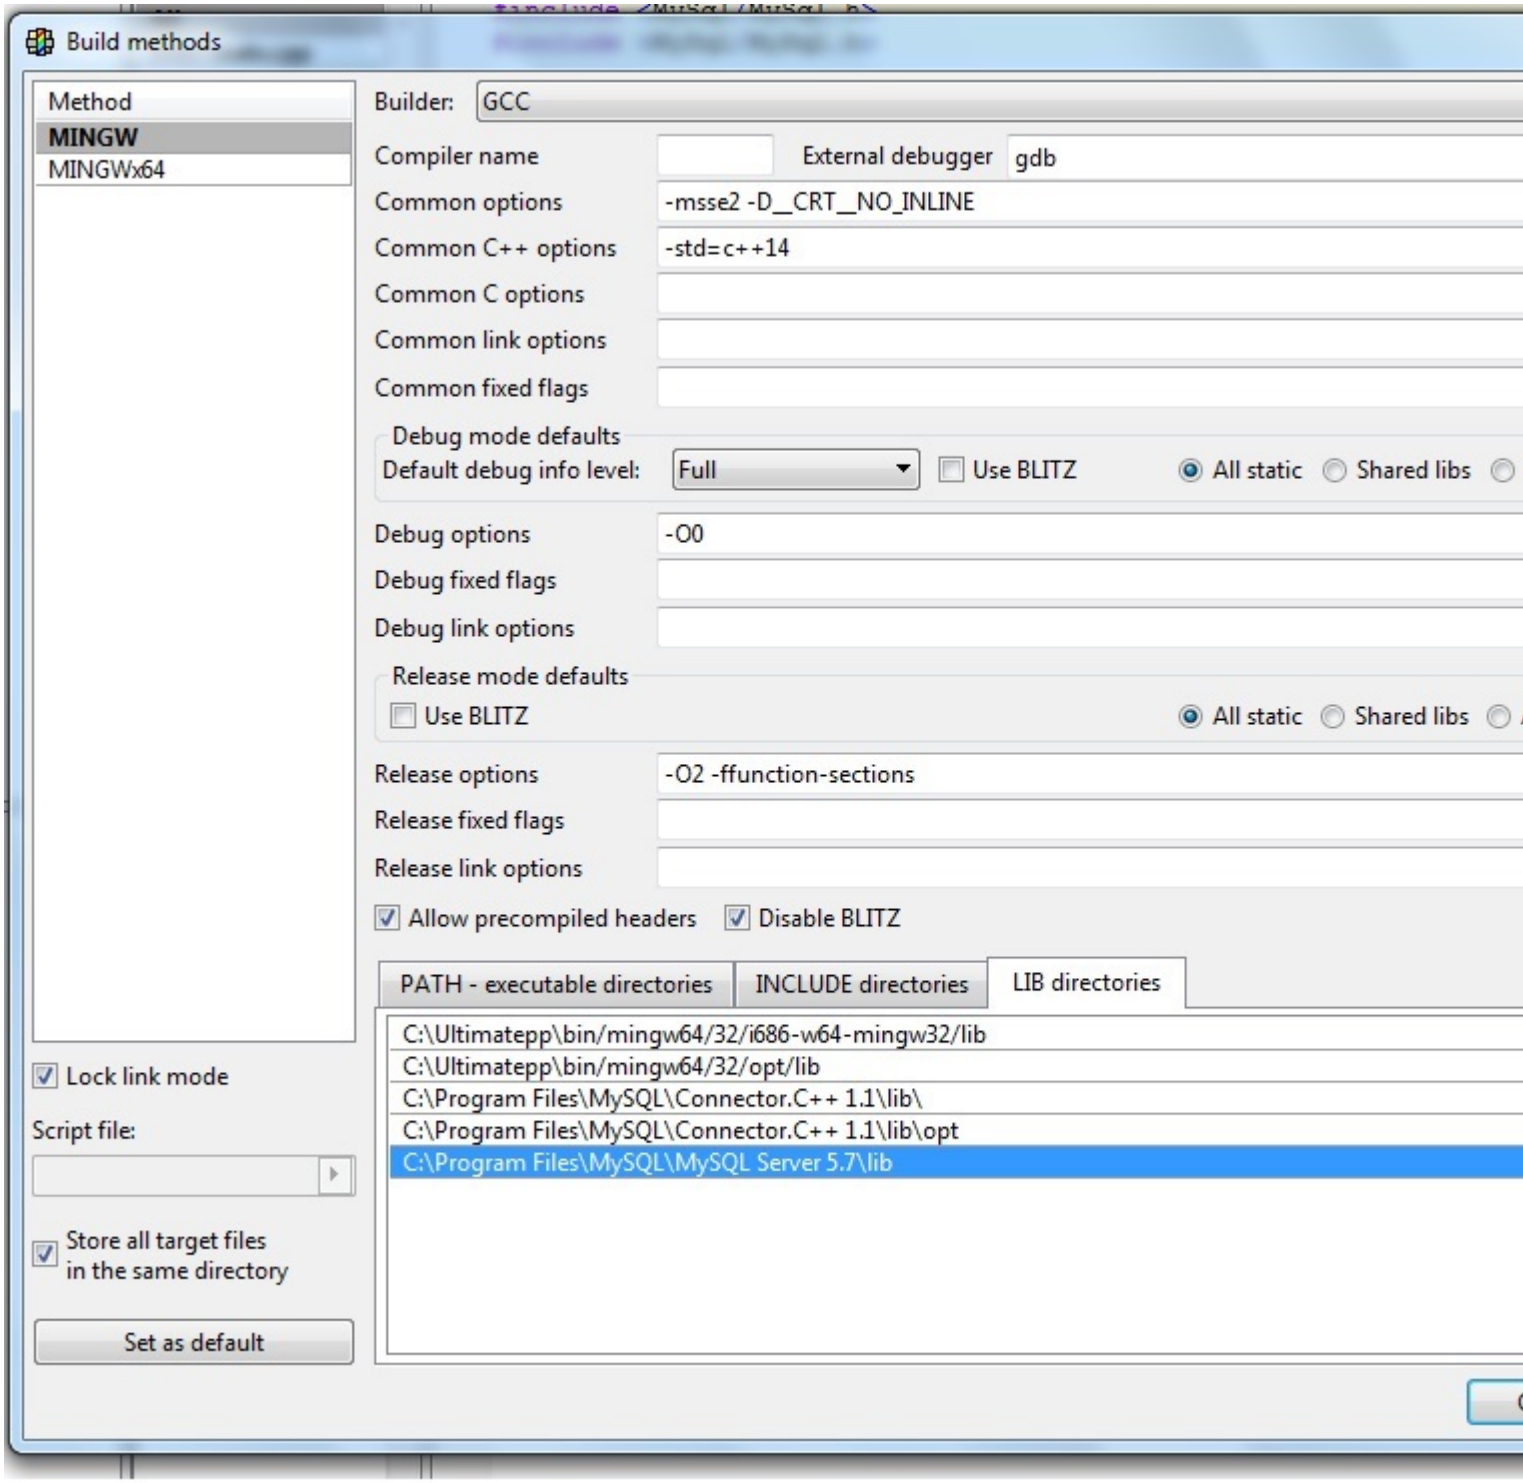

I know this is not the best topic for that discussion. But, what is in your lib tab? I believe there you should add path to mysql libraries. Currently, I don't know where the lib files are located on Windows - so you should try to find them by yourself and then specific path to it in lib tab.

Sincerely,
Klugier

And I know it is not the best place, but in the places where I publish it I do not answer, that's why I come here since it is a medium used more.

With today's issues fixed, we have got a new release candidate.

What about updating some old libraries? Like two years old sqlite or fixing some other errors?
