
Subject: Bug: TopWindow::IsFullscreen is not working under GTK

I was trying to make an application change to fullscreen mode and back by pressing F11. Unfortunately IsFullscreen() always returns false on Ubuntu.

This change to TopWindow::Fullscreen() in GtkTop.cpp would fix both FullScreen() and IsFullscreen():

```
TopWindow& TopWindow::Fullscreen(bool b)
{
    if (fullscreen = b)
        SetMode(FULLSCREEN);
    else
        SetMode(OVERLAPPED);
    return *this;
}
```

Now a simple toggle to/from full screen can be done like this:

```
Fullscreen(!IsFullscreen());
```

Hello,

I created redmine ticket (#1659) for your issue. We don't want to forget about it. Please wait for Mireks approval.

Sincerely and thanks for reporting,
Klugier

Should be now fixed. Sorry for the trouble and thanks for reporting.

I have used similar but a little bit different way (put setting fullscreen directly into SetMode).
