How does one bring back the list templates when creating a new package after launching theide? I could correct this be re-installing, but not a good use of time.

Steps to reproduce:
1) Launch theide
2) Select the assembly, MyApps
3) Select the button at bottom labeled, new package
3) Template frame displays a package list of <empty>

"make install" appears to have fixed the issue.

Hello,

I think you accidentally removed path to uppsrc in your assembly path. Please notice that templates are localized under following directory uppsrc/upt. When you assembly is missing that path there is no templates.

For example my bazaar assembly is healthy, because it has got path to uppsrc (To invoke assemblies paths just right click on assembly name - main package selection window):

/home/klugier/upp/bazaar;/home/klugier/upp/uppsrc

Sincerely,
Klugier

Thanks Klugier. I'll look into it.

Peter
