Hi,

here the almost finished IDE.

Can open multiple projects, identify used libraries, edit libraries from within the ide, and fully themable.

Attached a screenshot with a fancy theme and the theme editor opened.

I'm designing an IDE too.

One of the biggest challenges since it is somewhat similar to TheIDE was not repeating the same mistakes as TheIDE did.

I see your IDE borrows too from TheIDE in design. So there are at least 3 IDEs right now using CodeEditor and having a similar Setting dialog:).

But I must ask: what's up with the colors:). I hope it is just a color editor test.

Well, it's themable :p

And I like those colors... besides RED, which I've already changed!
