Hi!

I have some difficulties in using the substring search.

```
sText = "This is a long night.";
iPos = sText.Find("long");
```

I was thinking that it should work like this, but it doesn't. Some small example would help. I couldn't find anything in existing examples.

Sorry if this is a dumb question. I'm still new to U++, but like it a lot.

Thanks for any help

Well, this works:

```
#include <Core/Core.h>
```

```
CONSOLE_APP_MAIN
```

```
{  
String sText = "This is a long night."  
int iPos = sText.Find("long");  
Cout() << iPos << "\n";  
}
```

Hi Mirek!

Thanks for the fast reply. I had a stupid other error in the same line with the 'Find' function and I was always digging around the 'Find'. Sometimes it helps not to squeeze too many things in one line of code.

Keep up your good work.
