Simple app to use xbps package manager within gui, show system info, etc...
Config file can be tweaked to use more scripts or other distros/install systems.
for more read files...

LinuxInfoPkgr:
added:
+regexp=use internal regexp(fasterInsteadOfOuterGrep) to include only wanted results
+ondblclick <=added code
+menubarrejoiner=string <=join regexes with this string(def=space)
+menubarscrseparate=true <=execScriptsSeparatelly?
+--- <=menu separator
+menubarhideresult=true <=will hide script result, default is shown
+corrected some code for xbps instsys

Many new commands, for more read infolist.txt

Besides xbps instalsys(just a sample-min4LinesOfScript),
there is now option to use this as a file explorer, viewer and quick code/file editor.
For file explorer F3=view/edit, F4=editFile, dblClick=defaultInternalAction,etc.
For editor there is an inplace :> and ::> Ctrl-Enter command runner,
--help Ctrl-Enter for more

When dblclick and no def type found, first 256 bytes as hex are shown.
