Hi,
I managed to build 605rc2 release on Ubuntu 5.10. I renamed the '/upp/out' directory to 'upp' and placed in /usr/local/bin. The same with ide program. When I run 'ide' it tells me that " 'upp' directory not found ". What to do?

Oh, no, not "upp/out", but "upp"!

There need to be sources (like "uppsrc") and GCC32.bm inside "upp"

From "out" you need just "ide" binary.

Mirek

I put uppsrc to /usr/bin/local/upp. I didn't have the GCC32.bm file and it still didn't want to work without it. I took GCC32.bm from earlier binary release, edited a bit and ultimate++ works fine now.

Thank you for your help
