Hi there,
is there a way to use the carriage return in a PromptOK? Adding \n in the String does not generate an error, but it does not work.
Regards,
Gio

Hello,

Yes, if you need to use a C string (which contains CR (\r), LF (\n), etc.) try using DeQtf() function:
([http://www.ultimatepp.org/src\\$RichText\\$Utilities\\$en-us.html](http://www.ultimatepp.org/src$RichText$Utilities$en-us.html))

```
PromptOK(DeQtf(msg));
```

If you simply need to show some text and need a new paragraph in QTF format, you can use an ampersand "&" in your text message without using DeQtf(). See "Basic Qtf Codes" section:
[http://www.ultimatepp.org/srcdoc\\$RichText\\$QTF\\$en-us.html](http://www.ultimatepp.org/srcdoc$RichText$QTF$en-us.html)

Regards,

Oblivion

Thanks, that worked like a charm!
