U++ has this nice feature when some item can't be displayed in a rect, a tool-tip appears with the full text.

This works fine with a narrow TreeCtrl where you add a very wide child. Mouse-over the child and it will popup perfectly.

But if I add a display to the TreeCtrl, the popup jumps up about 2-3 pixels vertically.

This is an incredibly serious mega bug :lol:.

```
treetest::treetest()
{
    CtrlLayout(*this, "Window title");

    tree.SetRoot(Image(), "test");
    tree.SetDisplay(Single<ItemDisplay>());
    tree.Add(0, Image(), "aaaaaaaaaaaaaaaaaaaa");
    tree.Open(0);
}
```

Comment out the `tree.SetDisplay(Single<ItemDisplay>());` and the tool-tip vertical jump is no more.

Test case attached.

Hello,

Please create redmine ticket for that issue with the url to forum thread. It is more easier to track them there. And, of course there is less change that the bug will be missed.

Sincerely,
Klugier

Done!

<http://ultimatepp.org/redmine/issues/1727>

I'll also look into it if I have time but I'm super swamped right now.

Thank you!

I took a peek at the fix too. I'll check to see if it fixed on my side too.

Done!

I need to update my CodeEditor fork to compile with the latest, but the TreeCtrl is fixed!
