<b>Description</b>			
<p>I was playing a little bit with KDE 5 and it seems that it wrongly place system close button "X" when window is not re-sizable. It can be spotted on Bombs example and several TheIDE window. After moving window the "X" is located on normal position. More details in attached screen shot.</p> <p>On X11 backend everything seems ok.</p> <p>This bug is quite annoying :(</p>

I think this is KDE problem not ours.

The problem is easy - all we need to to is synchronize size hints before mapping window in the operating system.

Annoying issue ;)

I have got one question - do we need also to synchronized GDK\_WINDOW\_TYPE\_HINT\_UTILITY - in what cases we used this kind of window?
