Target version:	Release 2017.1		**Spent time:**	0.00 hour

Description

We need this kind of documentation, because we pointed to this type in other places. ImageBuffer for example points to RGBA. The same scenario is with primitive tpes like dword byte etc. I know that maybe this documentation is not perfect, but it would be better if it exists rather that it is not.

I think we should revert this changes.

Moreover we should refer as many things we pointed in documentation.

I believe that no docs were deleted.

The only thing I have done is to uncheck "includeable" flag for Core/src.tpp. With this flag on, theide produces/stores .tppi files, which can be used to include documents into user program. For Core, it was active by mistake.

I suggest reject.
