# U++ - Bug #259

## ide crashing with not closed #ifdef (?)

02/24/2012 07:30 PM - Miroslav Fidler

## Description

What I did find, though, is that a source file with a define that is not properly closed (when you forget to add an #endif) has the potential to crash the IDE with an 'Out of memory' exception.

I also observed this same problem with a namespace that was not properly closed.
