Description

Actually to prepare announcement texts is very annoying: hundreds of messages to filter.

The proposal is to do a program (or adding uppweb this feature) to do automatically the announcement text, to be filtered by a human before releasing it.

The tasks would be:
- To define and agree a svn log format
- To modify TheIDE to add in svn menu the options to fill the log format automatically
- To do a program (or adding to uppweb) to filter svn messages from last release and to prepare announcement prepared to follow different formats (Google, SF, FreshMeat, U++).
