Description

RichTextCtrl and RichEdit have different clipboard behaviour.

RichTextCtrl Copy() only takes the text

RichEdit Copy() takes text, fonts, Images and RichObjectType. However a RichObjectType can be pasted right into a RichEdit but not into a word processor.

It would be great if:

- RichTextCtrl would copy all and not only text
- RichEdit would copy RichObjectType so that they could be pasted in a word processor (as an image).
