Description

After trying to write some useful macros (related to creating deb packages in theide), I found that the macros in theide lack some useful features. Attached is a patch that attempts to fix it.

Changelog:

- Added couple methods for macros (see docs)
- Updated and extended macro documentation
- Added ToLower, ToUpper to Esc
- Changed behaviour of to_number() to return void when ScanDouble fails
- Updated and extended Esc documentation
- Added reference/Macro with extensively commented examples

Please check that it works as intended (especially on windows, I haven't tested that) and uploud. Thanks.

History

#1 - 03/13/2013 08:42 PM - Jan Dolinár

- File *macros.patch* added

#2 - 03/14/2013 08:48 PM - Miroslav Fidler

- Status changed from *Patch ready* to *Approved*

Sweet, applied.
