Target version:			**Spent time:**	0.00 hour

Description

There is a possibility to use not zoomed logical positions for layout items. By default, they are zoomable.
I propose the patch to distinguish them.

BUG with .lay files - 'Z's added
Upp GUI size in Win and Ubuntu

History

#1 - 05/31/2013 09:52 AM - Sender Ghost

- File deleted (483_uppsrc.diff)

#2 - 05/31/2013 09:52 AM - Sender Ghost

- File 483_uppsrc.diff added

#3 - 05/31/2013 11:07 AM - Sender Ghost

Personally, I see the problems with font sizes, zoomed layout size, overlapping widgets (in case of mixing zoomed and not zoomed logical positions).
Therefore, I consider this feature as experimental, which might be useful for someone who really want this.

#4 - 05/31/2013 02:54 PM - Sender Ghost

- % Done changed from 100 to 0

Seems like, the proposed patch is just a part of other changes for full support of mentioned feature.

#5 - 06/01/2013 10:30 AM - Sender Ghost

- File 483_uppsrc_2.diff added

The next parts are zoomable layout size and CtrlLayout* functions.

#6 - 06/01/2013 10:33 AM - Sender Ghost

- Status changed from Patch ready to Rejected
- Assignee changed from Miroslav Fidler to Sender Ghost

Overall, while I see this feature interesting, I think, that Ctrl::NoLayoutZoom static method is enough for most cases, while for specialized cases are possible to do without layouts.
