

U++ - Bug #488

Broken plugin/zip

06/30/2013 09:14 PM - Jan Dolinár

Status:	Approved	Start date:	06/30/2013

Description			
<p>I tried using plugin/zip for a while and noticed some of the functionality is seriously broken, both with GCC 4.8.1 and Clang 3.3. Two simple test cases:</p> <pre>StringStream out; Zip zip(out); // fails here  StringZip szip; szip.WriteFile("test", "test.txt"); // fails here</pre> <p>The first one crashes the program due to uninitialized variables, so it might be caused by my compiler settings, but I think it should be fixed anyway. The second one is definitely an error in code of StringZip::Create(). Patch is attached...</p>			

History

- #1 - 06/30/2013 09:20 PM - Jan Dolinár
- File zip.patch added
  - Subject changed from Broken to Broken plugin/zip
- #2 - 07/14/2013 09:42 AM - Miroslav Fidler
- Status changed from Patch ready to Approved
