Description

Since revision r3321, it happens that ASSERT has been defined in two several places (it was invisible before).

Extract from compilation log:

    uppsrc/Core/Diag.h:142:0: warning: "ASSERT" redefined
    uppsrc/Core/Defs.h:38:0: note: this is the location of the previous definition

What should we do about that? Which ASSERT is the right one, and is there a way to prevent redundancy?

Lionel

History

#1 - 04/07/2011 10:33 AM - Miroslav Fidler

- Status changed from New to Ready for QA

- Assignee changed from Miroslav Fidler to Lionel Orry

#2 - 04/07/2011 10:43 AM - Lionel Orry

- Status changed from Ready for QA to Approved

- % Done changed from 0 to 100

Thanks a lot Mirek!

Fixed in rev. r3328
