Description			
Hello			
CtrlLib/PrinterJob.cpp, function PrinterJob::Execute0() line 74, bool b = PrintDlg(&dlg);, raises an exception when called from a RichEdit::DefaultBar() print button if it is attached to a StaticRect instead of a TopWindow.			
A simple solution is to set in PrinterJob::Execute0(), line 61,			
dlg.hwndOwner = 0;			
instead of			
dlg.hwndOwner = GetActiveWindow();
