<b>Description</b>			
<p>I think we should handle OS resolution change event. This is very important, because in currently U++ release we need to restart our application to adapt to the new definition.</p> <p>Bugs related with this feature:</p> <ul style="list-style-type: none"><li>- Menubar can be open only on one certain screen when we turn on multimonitor mode in OS.</li><li>- When new resolution is bigger than previous window cannot be maximize.</li><li>- Probably more...</li></ul> <p>P.S.</p> <p>This feature needs changes in Upp CtrlCore initialization structure. We need to reinitialize static variables when resolution is changed.</p>
