Description

Task description:

I think that scrollbar default implementation should be able to invoke menu after right mouse button click.

Vertical scrollbar context menu should contains following structure:
  - Scroll here
  - Separator
  - Top
  - Bottom
  - Separator
  - Page up
  - Page down
  - Separator
  - Scroll up
  - Scroll down

Horizontal structure:
  - Scroll here
  - Separator
  - Left edge
  - Right edge
  - Separator
  - Page left
  - Page right
  - Separator
  - Scroll left
  - Scroll right

P.S.

If any of above operation isn't implemented. Just do it.

Hello,

I have created inital version. It dosen't contain implementation of "Scroll here" feature. Important changes:

- Added "WhenRightClick" callback to Pusher

- Replace callback1(this, method binding) to THISBACK notation in Scrollbar code

- Added context menu to Scrollbar

- Minor code standarization in CtrlLib

Can you review this code?

   - This version shouldn't be commited to trunk!!!

Implemented "Scroll here" operation.

What is missing:

- Translation (Only English version)

- Documentation for "WhenRightClick" callback (See the post above)

I will need to check some things before commit. This is preview version :)

Moreover I added variable "menu" to Scrollbar style (Enable by default). The purpose of this variable is to control this feature.

Implemented. Last "Scroll here" implementation works with the midpoint of the scrollbar.
