Catch it!!!

We need to change in function "IsAnySelection" (CtrlLib/TextEdit.h - 152 line) that cursor is different from anchor. Code:

```
    bool    IsAnySelection() const        { return anchor >= 0 && anchor != cursor; }
```

Should we change two other methods, too?

```
bool   IsSelection() const          { return IsAnySelection() && !rectsel; }
bool   IsRectSelection() const      { return IsAnySelection() && rectsel; }
```
